Copy Return To
Engineering Staff

- Engineering/Operational

- [REDACTED] AS-6 Tests

1. A winter test program of the AS-6 system has been scheduled for mid-November 1959 to late March 1960, in order to observe the long-term performance of the field unit under conditions of severe cold, ice, wind, etc. In addition, this test will provide a measure of the accuracy of the associated collection equipment. The test will require the periodic interrogation of the field unit by the base equipment at [REDACTED]

2. The field unit will be installed near [REDACTED] on or shortly after 17 November 1959. Beginning on that date, it is requested that [REDACTED] interrogate the field unit according to the attached schedule, and report the content of messages to Headquarters by [REDACTED] will be advised of any change in the proposed installation or test schedule.

3. This test will commence prior to the return to [REDACTED] of the AS-6 base programmer recently pouched to Headquarters for repair. Manual channel selection at [REDACTED] should not prove too great an inconvenience, however, since it will be necessary to monitor the field unit only when a transmission is expected. No emergency transmissions will be made until the automatic programmer has been reinstalled at [REDACTED]
